

(a) A. Forgetting Persists Without Normalization

(b) B. KC-MBON Weight Changes During Learning

(c) C. Protection Efficacy Across KC Overlap Regimes

(d) D. Or7a Veto Gates Prevent MBON Drift

KEY FINDINGS:

Forgetting Mechanism:

- MBON drift (primary)
- Not normalization
- Affects 0% overlap

Veto Protection:

- 78.8% reduction
- 2.6% synapses
- Works $\pm$ norm

Biological Insight:

- Population control
- Sparse coding +
- Memory stability

Statistics:

- $p < 0.001$ (veto)
- $R^2 = 0.875$
- $n.s.$ ($\pm$ norm)

(e) E. MBON Population Drift ($\Delta=0.101$)
